DESIGN

UX research · Prototyping · Design systems

BUILD

HTML · CSS · JavaScript · Python

ACCESSIBILITY

WCAG 2.2 A/AA, measured in a browser

[Month D, YYYY]

[Hiring manager name]

[Company]

[City, State]

RE [ROLE TITLE]

[One sentence. The single reason you are the answer to the problem this posting describes. Written after reading the posting, not before.]

Dear [Hiring manager],

[Why this role, at this company, now. Name the specific thing in the posting you are responding to.]

I have spent twenty years moving from print production into UX and then into building the software myself, and the through line has never changed. I make things that work for the person actually using them.

At **LUXIGA**, the consultancy I run in Portland, I take an engagement from research and information architecture through visual design, build and accessibility testing, then hand over a system the client owns outright. No subscription, no lock-in. That range is the point. I am not passing a file to an engineer and hoping the intent survives.

My foundation is visual. I have been designing since 2006, taught myself the Adobe suite and then HTML, CSS and JavaScript, and added UX research and design systems on top of that rather than in place of it. It is why my work ships looking like it was designed, not assembled.

[The specific proof paragraph. One project, what the problem was, what you did, and what changed. Pull it from the portfolio, do not summarize the resume.]

I treat accessibility as a precondition rather than a feature, and I measure it in a real browser instead of asserting it. That habit is why my work holds up for the users everyone else designs around.

I would welcome the chance to talk about [the role] and what the first ninety days would look like. Thank you for your time and consideration.

Sincerely,

LUKAS GREEN
